

WHY BALLISTIX?

Developed originally as a petroleum-proof anti-aggregate agent that has been tailored to provide a long-lasting, stunningly beautiful, sustainable finish that protects these surfaces from abrasive wear, UV, microbial growth, odor, heat and chemical attack.

BallistiX is an inorganic, synthetic coating designed to protect for years to come.

BallistiX is extremely slip-resistant without altering aesthetics.

BallistiX is a Silico-Ceramic-Silane-Hybrid Multipurpose

APPLICATIONS

Indoor/Outdoor

Commercial and Residential!
If it's clean, it will bond!

Decorative Concrete, Polished,
Honed, Shot-crete, etc.

Tile/Grout, Cultured/Veneer
Stone, Hardscapes, etc.

Epoxy, Urethane,
Polyaspartic, Urethane
Cement, Acrylics, etc.

Vinyl flooring and surfaces
(*RANGER products only*)

Limitless Potential!

TECHNOLOGY

BallistiX products are specially designed to have a chemical reaction with the surfaces they are applied. The result of that reaction forms a very strong bond, on a molecular level known as a covalent bond. The chemistry behind this technology allows the surface coating to create a unique fusion (covalent bonding) between the treatment and the substrate to be protected. It is semi-penetrating, impervious from above while remaining breathable from below.

This bond is nearly unbreakable!
