

# SEAL, ENHANCE, PROTECT.

-  Covalent Bonding
-  1K Single Component
-  Anti Graffiti
-  Extreme Hardness
-  UV Stable
-  Spray Applied

Coval Concrete is a thin-film, single component coating designed to work over Coval Primer to seal, enhance and protect porous concrete surfaces. It creates a covalent bond with the coating substrate and is easily and quickly applied with an acetone pump sprayer. Coval Concrete is used on retaining walls, infrastructure, and all forms of precast concrete.

Coval Concrete forms a chemically resistant barrier to protect against staining, etching, and graffiti; allowing for easy cleaning, reduced maintenance costs, and less dependence on harsh chemicals. Coval coatings contain less than 100 g/L VOCs and exceed SCAQMD Rule 1113 requirements for air quality; as well as contain no known carcinogens under Proposition 65, California's Drinking Water and Toxic Enforcement Act of 1986.

Coval Concrete helps protect and maintain buildings, bridges, overpasses, walls, and more.

**Infrastructure:** Prevent weathering, staining, corrosion, and chloride ion penetration to extend the serviceable life and appearance of any sized project.

**Precast:** Ensure your public spaces, facilities, and furniture stand up to the constant abuse from both Mother Nature and the general population. Increased resistance to abrasion and graffiti help reduce maintenance and replacement costs for years, even in high traffic areas.

**Retaining Walls:** Protect beyond the capabilities of a penetrating sealer with a coating that enhances the natural beauty of your concrete, brick, stone, or paver substrates and bonds directly with the surface.

Achieve ultimate protection on nearly any substrate with these related products. Contact your authorized Coval product representative or visit our website for details.
