Client

Magni Telescopic Handlers

Project

Warehouse & Service Center

Product

Coval Concrete Coating

Size

9,000 sq ft

Timeline

1 Day

Coat SystemCoval Concrete
Coating

Magni opened up a new headquarters in New Jersey and was looking for a coating that could be applied easily to their warehouse and service center. After considerations, Magni decided Coval Concrete Coating was a great candidate for the project. Coval Concrete forms a chemically resistant barrier to protect against staining, etching, and graffiti; allowing for easy cleaning, reduced maintenance costs for labor and materials, and less dependence on harsh cleaning chemicals.

Challenges

One of the primary challenges was having a floor that could handle machine fuel and other strong fluids, while maintaining a budget for the project. Magni was looking for a high-performance flooring solution designed high traffic environment for an extended period. Budget and time were top of mind as well.

Solution

Magni used ArmorPoxy's Coval Concrete Coating. The comprehensive single component coating is designed to seal, enhance, and protect concrete surfaces. Two men applied the coating in less than two hours. They did not need to use the Coval primer since the concrete was extremely dense. Magni saved time but coating the floor in one day and money by using the Coval cost effective solution.

“I'm very pleased with the floor. It makes the warehouse floor pop with a shine and easy to clean. I enjoyed working with ArmorPoxy. It's a good company with a great product and knowledgeable people. I would use this product again and I will.

Features

- Easy to install
- Spray on coating
- Chemical resistant
- Seals concrete
- Easy to clean
- Non slip
- Prevents hot tire pickup
- Stain resistant
- Abrasion resistant
